Review Package

BLANK SIGN-OFF TEMPLATE / NOT A COMPLETED REVIEW

This is the output contract for a later financial workflow. It contains no model conclusions, executed actions or human approval. Complete it only from a recorded run and independently checked sources.

Control field	To be supplied by the recorded workflow
Case / run / package version	[case_id] / [run_id] / [package_version]
Prepared by / review date	[preparer] / [review_as_of]
Policy / input binding	[active_policy_id] / [input_sha256]
Package / proposed-action binding	[package_content_sha256] / [actions_sha256]
Runtime / checker identity	[model identity and settings] / [checker version]
Current state	PENDING HUMAN REVIEW

01 / Scope and changes

List the policy changes and source changes separately. For each change retain before/after values, effective dates, affected checks and the source record. Do not use a v1/v2 policy comparison as evidence of Harness improvement.

02 / Source inventory

Attach source IDs, versions, dates, file hashes and record citations. Distinguish source measurement date from receipt time. Identify missing, stale, conflicting and superseded evidence.

Findings and evidence

03 / One record per finding

Required field	Meaning
Finding ID / control ID	Stable finding identifier and the policy control tested.
Observed / limit / units	Calculation inputs, denominator, method and result; separate as-reported and verified values.
Business state	Within policy / review required / needs source.
Evidence	Policy page or field + source ID + file + record + relevant fields + source date.
Uncertainty	Known gaps, coverage, stale values and conclusions affected.
Before / after	Previous value and current value with their separate source bindings.
Next step	Proposed action or source request, owner, due condition and approval requirement.

04 / Sources requiring a second check

[source_id / problem / requested confirmation / owner / due / response status]. A missing source stays unresolved until an actual reply or replacement is recorded. A successful tool transport is not sufficient evidence.

Actions and handoff

05 / Proposed actions

Required field	To be supplied
Action ID / finding links	[action_id] / [finding_ids]
Description and bounded effect	[specific request, artifact or review action]
Owner / due condition	[responsible role] / [date or before-signoff condition]
Evidence / dependency binding	[source references and current input hash]
Decision	PENDING / APPROVED / REJECTED / INVALIDATED
Execution receipt	[not executed, or actual result with idempotency key and receipt]

06 / Human sign-off

Reviewer: _____ Role: _____

Decision: _____ Decided at: _____

Rationale / conditions: _____

Bind the decision to the input, active policy, package content and exact proposed actions. This static template is not an authentication system, digital signature or approval service. Source or proposal changes invalidate prior approval; unresolved findings must remain visible at handoff.

07 / Handoff acceptance

Receiving role: _____ Accepted at: _____
Remaining obligations / owner: _____
